Dear Recruiter,

I am a very cool and calm person who loves to learn new stuff daily. I have done a 2 Months **Internship at SAP Labs Pvt Ltd**. I am currently working at SAP Labs as Associate Developer on the Observability team, mainly on Cloud application monitoring and performance. I have a good experience on Cloud and very much comfortable in using **AWS (EC2, S3, IAM, Subnets), Kubernetes, Cloud Foundry**, **Jenkins (CI/CD), Grafana, Prometheus, Istio, Linux,** as I am working on this in day-to-day work. I also have good experience load testing using tools like JMeter, K6. And with monitoring tools **Dynatrace**.

Apart from this experience, I have a good experience in developing applications in Full stack applications using **HTML, CSS, JavaScript, Python** and **Android** application using android studio.

Looking Forward to work and learn new technologies.

Thank You
HARIHARAN S
